

Information sheet for the course

Nursing in the Selected Surgery Branches

University: Alexander Dubček University of Trenčín																									
Faculty: Faculty of Health Care																									
Course unit code: OseVChO/d	Course unit title: Nursing in the Selected Surgery Branches																								
Type of course unit: compulsory																									
Planned types, learning activities and teaching methods:																									
Seminar: 1 hours weekly/13 hours per semester of study; full-time																									
Lecture: 1 hours weekly/13 hours per semester of study; full-time																									
Supervised practical output: 2 hours weekly/26 hours per semester of study; full-time																									
Number of credits: 2																									
Recommended semester: 5 th semester in the 3 rd year (full-time)																									
Degree of study: I (bachelor)																									
Course prerequisites: Anatomy and Physiology II., Communication in Nursing																									
Assessment methods:																									
To obtain credits for the course, a student must receive 100 points = 100 % per semester.

Conditions for the assessment																									
Activity	Number of points																								
Active participation at seminars	40																								
Oral examination	60																								
Total	100																								
Assessment																									
100 – 94 %	A - excellent																								
93 – 88 %	B – very good																								
87 – 82 %	C - good																								
81 – 76 %	D - satisfactory																								
75 – 70 %	E - well																								
69 – 0 %	FX - slack																								
Learning outcomes of the course:																									
After the completion of the course Selected surgery branches a student acquires basic knowledge from prevention, diagnostics, treatment and nursing care in ophthalmology and otorhinolaryngology. A student is able to define nurse's role and the specificities of the nursing care in the selected diagnoses of ophthalmology and otorhinolaryngology.																									
Course contents:																									
Lectures:																									
Ophthalmology:																									
<ol style="list-style-type: none"> 1. Characterisation and history of ophthalmology. Theoretical review of the anatomy and physiology of eye vision. 2. Basic examination methods in ophthalmology / visual acuity, field of vision, colour perception, intraocular pressure. 3. Outline of investigative and operational equipment in ophthalmology, their use in ambulatory and hospital practice. Nurse's role in the security functionality expected by devices, and in the problem of sterility and disinfection in ophthalmology. 4. Symptomatology of common eye disorders and their treatment. 5. Ophthalmology in relation to other medical disciplines. 																									

6. Medical documentation within the eye clinics and nursing written record of hospitalised patients. Movie about the eye during the operation.

Otorhinolaryngology:

7. Characterisation of the field of otorhinolaryngology, concept of otorhinolaryngology.
8. Basic testing methods in otorhinolaryngology, overview of special testing methods, special equipment and tools used in clinical otorhinolaryngological (ORL) practice.
9. Symptomatology of the most frequent otorhinolaryngological diseases.
10. The most frequent diseases in otorhinolaryngology, their diagnostics and treatment.
11. Breast nasopharynx almonds, angina, chronic inflammation of the tonsils climatic, inflammation of the sinuses, acute otitis media, chronic otitis media, laryngitis, nasal polyps, buckling nasal septum, precancerous laryngeal malignant tumours of the larynx, pharynx, tumors, foreign bodies in the esophagus.
12. Treatment of sudden situations in otorhinolaryngology and diagnosis.
13. Prevention of otorhinolaryngology.

Seminars:

1. Examination of basic visual functions.
2. Basic nursing procedures in ophthalmology. A method of drug delivery - eye drops, application of ophthalmic ointments, injections - subconjunctival, retrobulbar. lacrimal passages flushing.
3. Examination of binocular function, use in children with squint, demonstration of examination.
4. Exophthalmometry . Eye and orbit ultrasound, basic ultrasound examination of eye.
5. Treatment of eye injuries.
6. Ophthalmology outpatient's record. Attendance record as a result of the nursing process in hospitalized patients.
7. Stay on ocular operating theatre, paediatric eye surgery, practical demonstration methods of photographic documentation, FAG and the role of nurses in these processes.
8. The objectives of nursing in otorhinolaryngology.
9. General background to nursing process in otorhinolaryngology.
10. Assessment in otorhinolaryngology.
11. The role of a nurse in the examination methods in otorhinolaryngology.
12. Nursing process in the selected diseases.
13. The role a nurse in the prevention of hearing damage.
